

*High-performance – Flexibility – Competence*

Your reliable partner  
for long-lasting drainage  
solutions

## Our material – resin concrete

We have been working with the high-quality material of polymer concrete for over 40 years. It consists of natural mineral quartz and resin and offers various structural and environmental advantages. In comparison with conventional cement-bound materials, resin concrete enables easy-to-handle unit weights. The result is considerable savings on costs and time.

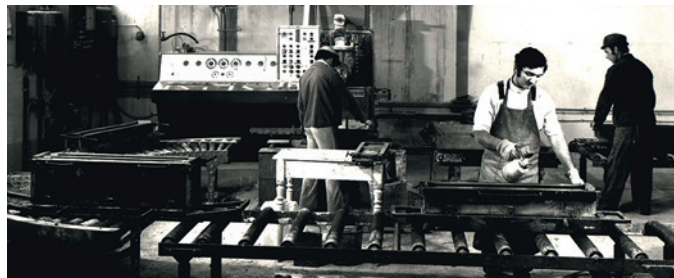

Additional advantages as a result of the closed material matrix and the use of high-quality components include liquid impermeability, anti-corrosive properties and resistance to a wide substances.

As a result, surfaces can be designed which drain rainwater and reliably protect the groundwater from environmental pollution. Therefore, there are many good reasons for the use of resin concrete.

### *Customer satisfaction in focus*

Since its founding in 1972, ANRIN GmbH has made a name for itself as a specialist in the development and production of high-quality drainage channels made of resin concrete with cover gratings for all requirements of modern drainage systems. The typical details of our products, such as the UNILINK gap, OvalGrip design and our

patented locking technology have been concepts familiar within the industry for years.

Customer satisfaction lies at the heart of our approach and activities. We take on your challenges each day with flexibility, commitment and expertise.

This includes the early recognition of your requirements and quick reaction with tailored solutions, perfect service, and extremely short delivery times. Thanks to high-performance distribution and logistics, we are capable of supplying any construction site in Germany within 48 hours and worldwide within a few days.

### ***Quality is the decisive factor***

Whichever product you choose from our broad assortment: Consistent observance of the highest quality standards is always guaranteed – from the material acquisition to the production to the delivery. ANRIN GmbH is certified in accordance with DIN EN ISO 9001:2008. This certificate applies for the development, production and sales of resin concrete drainage systems.

Our company has also been issued the internationally valid KOMO® product certificate, which also pertains to the elements for channel drainage, as well as the BSB® product certificate, which confirms the environmental compatibility of the products and production for the groundwater, as well as their recyclability. Customers who choose ANRIN quality are assured of receiving a long-lasting, environmentally-compatible and highly capable product.

No standing still at ANRIN GmbH. We are under continuous development and always clearly orient ourselves towards market requirements. Millions of meters of successfully installed channels are proof that we are headed in the right direction with our customer-oriented strategy.

***With our sights firmly on the future***

**Gerald Broermann**  
Managing Director

**Markus Stöppel**  
Sales Director

The basis of our success is a team of highly qualified and committed employees, both office-based and in the field, in customer assistance and administration, in the development department and production, as well as in commissioning and shipping. ANRIN GmbH currently employs a permanent staff of around 45 experts.

Their qualification is a central element of our company philosophy. For this reason, ANRIN GmbH is developing its commercial operations and challenging its staff to improve their expertise in the scope of an internal advanced training initiative. As a result, the company's quality goals will also have a solid foundation for future tasks and challenges.

The company also continuously invests in modernisation and expansion. For instance, a new CRM system was recently purchased for optimised customer assistance. Considerable investments have also been made in the environmental area and in the expansion of warehousing and logistics.
